1 Overview

1.1 Short Description

The *OfferPrice* request allows the user the selection of one of the offers returned in *AirShopping* and to refine the offer price, by selecting one or more offer items.

It can also be used to reprice a service following a *ServiceList* request in post-booking flow.

1.2 Current Scope

Are considered in the scope of the current release:

- Mono and multi passenger itineraries.
- One-Way and Round-Trip Flights.
- Prime Flights.
- Airline marketed flights.
- OB fees.
- Ancillary Services.
- Localized fare conditions from static file:

The description of the fare condition are returned in OfferPriceRS in a localized free text format. The data covers only flight content and is returned based on Airline inputs via static file.

Here is a non exhaustive list of conditions that can be returned:

1. Carry-on and checked baggages
 2. Cancellation rules
 3. Lounge access
 4. Change rules
 5. Priority check-in & boarding
 6. Seat selection
- Localized fare conditions from Airline CMS:

In case the CMS integration is activated for the partner, the description of the fare conditions are returned from the Airline CMS instead of the static file. It is supported for all OfferPrice flavors.

For OfferPrice Upsell from OfferID and OfferPrice Schedule Driven, the fare conditions are returned for all offers in the result.

Here is the list of localized conditions that can be returned:

1. Cancel conditions
2. Exchange conditions
3. Award upgrade conditions
4. Award accrual conditions
5. Baggage allowance conditions
6. Seat selection conditions

7. Lounge access conditions
8. Priority conditions
9. Disclaimer Messages

1.3 Out of Scope

Here are the limitations related to the current release:

- The pricing flow is limited to only one offer per transaction. Multiple offer items are supported but only one mandatory offer item.
- Only one FOP is accepted per transaction
- "Pack of services" are returned as services (SSR master)
- Group PNRs are not supported
- FQTV information input in OfferPrice will not generate a reevaluation of the pricing conditions (fare basis / fare family) of the offer (created at shopping time)

1.4 Upsell

1.4.1 Upsell schedule driven

During OfferPrice, the travel solution is sent in input (Flight, booking class, passenger).

No Farebasis or Fare Family are sent in input. The pricing is done with Commercial Fare Family.

The upsell results are returned on all applicable Fare Family of the given Commercial Fare Family.

In case an AirShopping is executed before the OfferPrice in the upsell flow, it will have in response the lowest per Travel solution (no Offer ID).

1.4.2 Upsell from offer

OfferPrice upsell (from offer) allows the user to get upsell offers from an input offer. The process is available for AIR offer items only.

1.4.2.1 Prerequisite

- Airshopping performed using the BestPricingOption option.
- Services are not supported in the flow.

1.4.2.2 Limitations

The following features are not supported in the upsell from offer request:

- Corporate code
- Bcode
- FQTV
- Currency override
- Air Discount
- Baggage weight

Diagram showing the *OfferPrice* request in the global NDC flow (example with AirShopping):

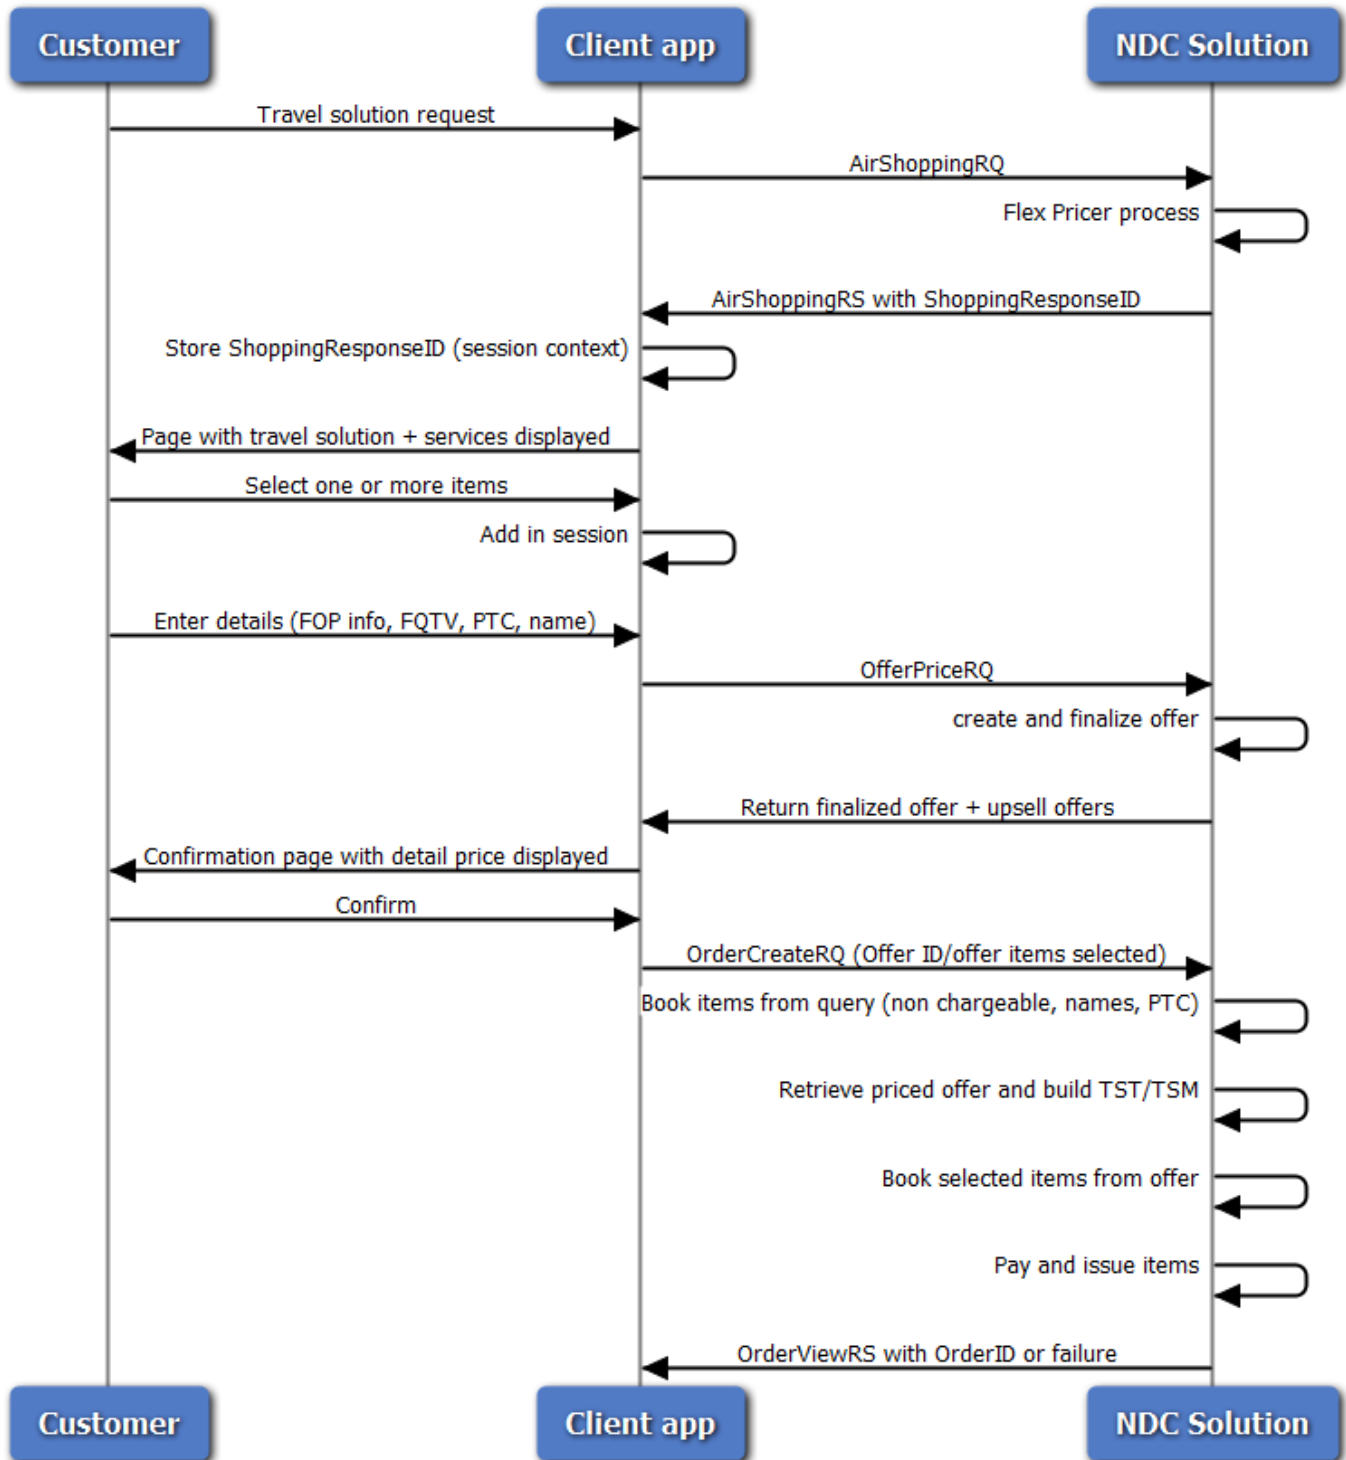

Diagram showing upsell from offer processing:

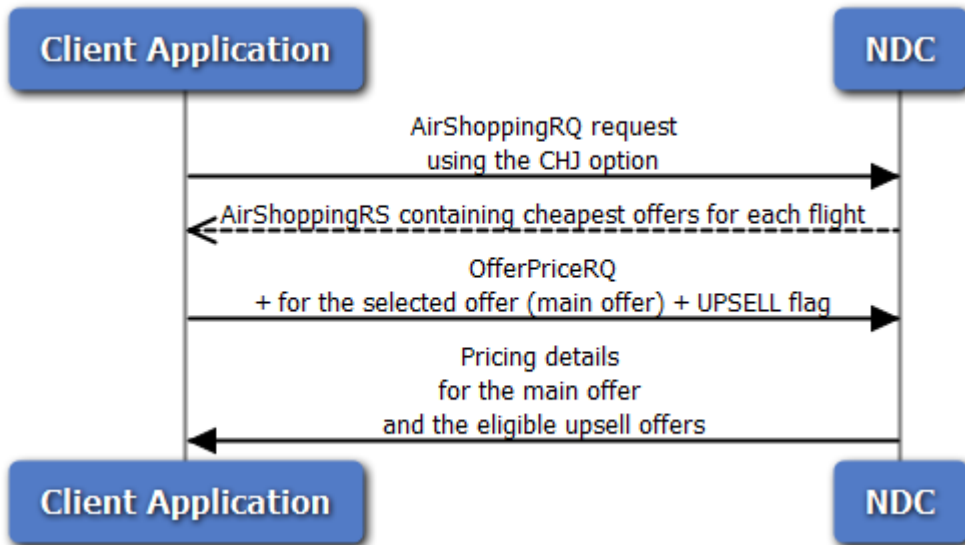

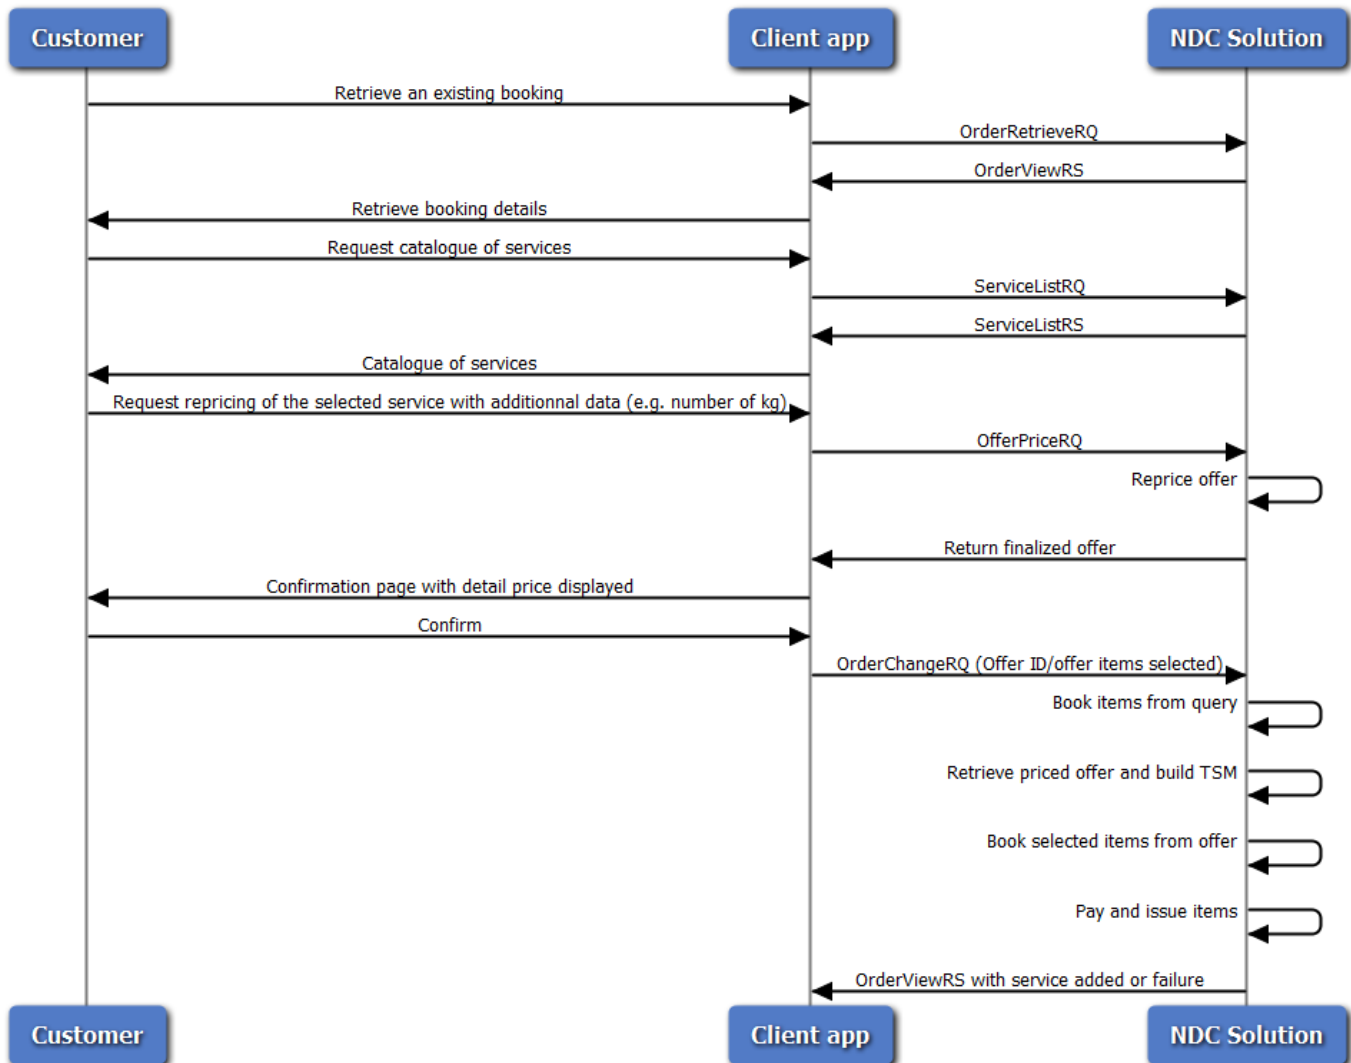

Diagram showing the *OfferPrice* request to reprice a service in post-booking flow:

1.6 Prerequisites

The *AirShopping* transaction has been successfully run and at least one valid offer with at least one mandatory offer item is stored.

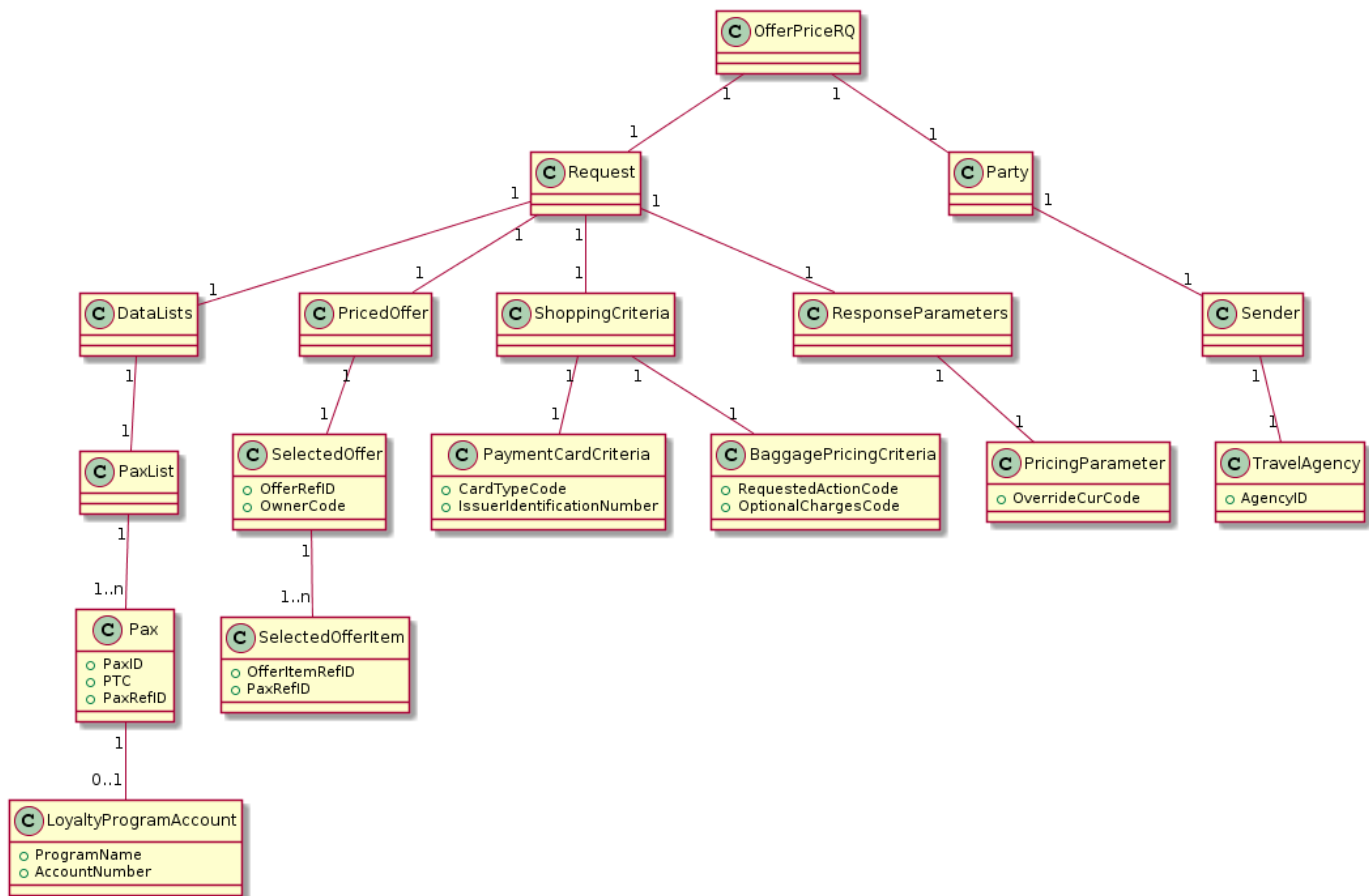

In case of Upsell flow, the travel information is sent instead of offer. In that case, when the *AirShopping* is called before the *OfferPrice*, the lowest travel solution is returned without offer creation.

In case the *OfferPrice* is used to reprice a service, the *ServiceList* transaction has been successfully run and at least one valid offer is stored.

2 Building a Query

2.1 Functional Description

Class diagram describing the *OfferPriceRQ* xml:

2.2 Implementation

This section describes the implementation of the input message based on the **NDC schema version 18.1**.

2.2.1 Version

Version	Designation	Repetition	Status	Location	Comments
---------	-------------	------------	--------	----------	----------

Message version	1	M	OfferPriceRQ/PayloadAttributes/Version	Set to the NDC schema version to which the message complies to.

```

2.2.5 Offers

The core query parameters are the Offer and the Offer item(s), selected among the proposed solutions from previous shopping transactions. Only one offer can be requested per transaction. If more than one Offer is requested, the first of the list is processed and the rest is ignored.

The minimum set of information needed to process an Offer is:

- **the Offer ID:** it must be the value received in output of a previous shopping transaction, within the time limit of the offer validity. If the offer ID is not valid, an error is returned.
- **the Owner of the offer:** this element is mandatory in the XSD but not needed for the process. The value is going to be ignored.
- **at least one Offer Item ID:** it must be the value received in output of a previous shopping transaction.
- **passenger association:** for each offer item the passenger reference can be given, to indicate the purchase choice. If no passenger association is given in input, the offer item is by default associated to all travelers to which the item is associated to in the

offer storage. An error is returned by the system if the offer item is not applicable for at least one of the associated passengers.

OfferDesignation	Repetition	Status	Location	Comments
OfferRefID	1	M	OfferPriceRQ/Request/PricedOffer/SelectedOffer/OfferRefID	Reference to the OfferID of the selected Offer (either a standard Offer or an a-la-carte Offer) returned in a previous shopping response.
OwnerCode	1	M	OfferPriceRQ/Request/PricedOffer/SelectedOffer/OwnerCode	Designator of Airline that owns/assigned these IDs. Examples: BA
ShoppingResponseRefID	1	M	OfferPriceRQ/Request/PricedOffer/SelectedOffer/ShoppingResponseRefID	Reference to unique shopping session response ID, as provided in the airline's previous shopping response.
	1..n	M		

SelectedOfferItem			OfferPriceRQ/Request/PricedOffer/SelectedOffer/SelectedOfferItem	OfferItem selected by the Passenger for inclusion in the requested Order.
OfferItemRefID	1	M	OfferPriceRQ/Request/PricedOffer/SelectedOffer/SelectedOfferItem/OfferItemRefID	Reference to the OfferItemID of the selected OfferItem (contained in either a standard Offer or an a-la-carte Offer) returned in a previous shopping response.
PaxRefID	1..n	M	OfferPriceRQ/Request/PricedOffer/SelectedOffer/SelectedOfferItem/PaxRefID	Reference to passenger(s) for which this OfferItem and selected Services (in case of Service Bundles) applies.
Number of KG	0..1	O	OfferPriceRQ/Request/PricedOffer/SelectedOffer/SelectedOfferItem/SelectedALaCarteOfferItem/Qty	In case of service

for with price is based on weight, number of kilograms to be booked for the corresponding OfferItem.

```

    <SelectedALaCarteOfferItem>
      <Qty>5</Qty>
    </SelectedALaCarteOfferItem>
  </SelectedOfferItem>
</SelectedOffer>
```

2.2.6 PaymentCardQualifiers

If the form of payment chosen by the purchaser is a credit card, some details about the payment card must be given in the *OfferPrice* input with the aim of computing the associated fees, if applicable. Only one form of payment can be described in the query. This credit card is applied by default to all the passengers and it pays for the entire purchase amount.

Required information:

- Card Type: the two-letters payment card type.
- Issuer Identification Number: Payment card IIN/ BIN number. This is the first 6 digits of a credit card number known as the Issuer Identification Number (IIN), previously known as bank identification number (BIN), that identifies the institution that issued the card to the card holder.

PaymentCardQualifiersDesignation	Repetition	Status	Location	Comments
CardTypeCode	1	M	OfferPriceRQ/Request/ShoppingCriteria/PaymentCardCriteria/CardTypeCode	Credit card type. Example: MC, VI
IssuerIdentificationNumber	1	M	OfferPriceRQ/Request/ShoppingCriteria/PaymentCardCriteria/IssuerIdentificationNumber	First 6 digits of the credit card number. Example: 401123

```
<ShoppingCriteria>

2.2.8 OriginDest

In case of upsell option, the travel solution is sent in the OriginDest group:

OriginDestDesignation	Repetition	Status	Location	Comments
OriginStationCode	1	M	OfferPriceRQ/Request/OriginDest	IATA defined code identifying a city or station.
DestStationCode	1	M	OfferPriceRQ/Request/OriginDest	IATA defined code identifying a city or station.
PaxJourneyID	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxJourneyID	Unique flight ID. Ex: JRN1, JRN2, ..
CabinTypeName	1	O	OfferPriceRQ/Request/OriginDest/PaxJourney/CabinType	Cabin Name such as ECO, BUS, etc. Needed to target the different sets of fare families that are configured for NDC.
PaxSegmentID	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxSegment	Uniquely identifies a Passenger Segment

				within the context of one message.
IATA_LocationCode	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxSegment/Dep	IATA defined code identifying a city or station.
AircraftScheduledDate Time	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxSegment/Dep	The Scheduled Date and Time of Departure of the aircraft at the terminal or departure gate at an airport.
IATA_LocationCode	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxSegment/Arrival	IATA defined code identifying a city or station.
AircraftScheduledDate Time	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxSegment/Arrival	The Scheduled Date and Time of Arrival of the aircraft at the terminal or departure gate at an airport.

CarrierDesigCode	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxSegment/MarketingCarrierInfo	Airline code assigned to a carrier. Either ICAO-defined 3-character code or IATA-defined 2-character code.
MarketingCarrierFlightNumberText	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxSegment/MarketingCarrierInfo	The numerical designation of a flight as it is marketed by a carrier.
RBD_Code	1	M	OfferPriceRQ/Request/OriginDest/PaxJourney/PaxSegment/MarketingCarrierInfo	Code used to identify a particular RBD (e.g. P, J, W, M, etc.). The process retrieves the cheapest available fare for the selected flight and CFFs, so in input the RBD

code might be different than the input one.

3.2.6 OtherOffers

This element contains the price of the upsell offers and the references to the associated passengers, flights and, if applicable, services. Only one repetition of *OtherOffers* is supported in current *OfferPrice* implementation.

- **OfferID:** the element contains the ID of the priced offer and the code of the *Owner* as an attribute. Warning: the process could return a different offer ID than the one given in input. Please refer to the specifications for further clarification.
- **OfferItem:** it is repeated for each priced offer item. It contains the ID of the offer item in the *OfferItemID* attribute at the element root and it includes price information in the sub-elements. Warning: the process could return a different offer item ID than the one given in input. Please refer to the specifications for further clarification.

- RequestedDateInd: container of price and associations details.
- Total: total offer item price is returned here (including fees if applicable).
- Detail: for each passenger, offer item price information details are repeated to list the following information:
 - Total Amount: identified by the tag TOTAL AMOUNT PAXn in Application element
 - Base Amount: identified by the tag BASE AMOUNT PAXn in Application element
 - Total Tax Amount: identified by the tag TAXES AMOUNT PAXn in Application element

3.2.7 PaxList

This element contains the list of passengers for which the offer has been priced. You will find here the same passengers requested in *OfferPriceRQ*, with the same *PaxID* values. The *OfferPriceRS* returns, for each passenger, the key ID and the PTC.

- **PaxID**: the same value given in input by the user is returned in the reply, so that the calling application can keep track of the products and the prices associated to each passenger.
- **PTC**: passenger type code

3.2.11 BagAllowanceList

One or several *BagAllowance* elements can be present for each offer item containing flights. Two types of checked baggage allowance are possible:

- Piece Allowance
- Weight Allowance

In case of piece allowance the following information are returned:

- BaggageAllowanceID: unique allowance identifier
- Applicable Party: this element specifies the allowance application. The value is always *Traveler*, meaning that each Checked Bag Allowance applies to a single passenger
- Total Quantity: number of bag pieces included in the allowance

- Piece Dimensions Allowance: it indicates we are measuring the allowance in PC (pieces). The attribute *Qty* is mandatory in the XSD and it repeats the same value given above in *TotalQty*

In case of weight allowance the following information are returned:

- **BaggageAllowanceID:** unique allowance identifier
- **Applicable Bag:** this element specifies the allowance application. The value is always *Traveler*, meaning that each Checked Bag Allowance applies to a single passenger
- **Maximum Weight Measure:** weight value
- **Maximum Weight Unit Of Measure:** unit of measure for the weight given above

Note: In this example fare conditions are returned in English. Other languages are available as soon as provided by the airline. The chosen language has to be sent in OfferPrice request (OfferPriceRQ/Request/ResponseParameters/LangUsage/LangCode). In case no language is received in the request, the descriptions are returned in English.

- Localized fare conditions from Airline CMS:

In case the CMS integration is activated for the partner, the description of the fare conditions are returned from the Airline CMS instead of the static file. This is the full list of fare conditions that can be returned by the Airline CMS:

4 Troubleshooting

4.1 Errors

In this section we describe the OfferPriceRS in case of errors occurred during the process.

- **Input validation errors**

If the *OfferPriceRQ* does not respect the schema the system sends the following error:

UNABLE TO PROCESS SYNTAX ERROR ([CM#903](#))

If the *OfferPriceRQ* does not contain the mandatory input (for example, missing ObjectKey) the system sends the following error:

UNABLE TO PROCESS SYSTEM ERROR ([CM#911](#))

If the *OfferPriceRQ* contains a currency code different than the one stored in Offer during shopping time, the system sends the following error:

INCONSISTENT INFORMATION BETWEEN THE REQUEST AND THE STORED OFFER ([CM#996](#))

- **Errors related to the offer**

When the system is unable to retrieve the offer from the specified ID the system returns the following error:

UNABLE TO RETRIEVE OFFER ([CM#](#))

```
<OfferPriceRS>
  <Error>903
    <DescText>UNABLE TO PROCESS SYNTAX ERROR</DescText>
  </Error>
</OfferPriceRS>
```

4.2 Warnings

- **Frequent Flyer related warning**

When frequent flyer data are sent in the query, the system validates their validity. If the frequent traveler information from the input are invalid, the process does not stop but the response is enriched with a warning appended message to inform user that at least one frequent flyer number/data in the query is not valid.

INVALID FREQUENT TRAVELER NUMBER ([CM#260](#))

- **PTC related warning**

When PTC data are sent in the query, the system validates their validity. If a PTC from the input doesn't match the PTC that has been returned in *AirShoppingRS* for the same passenger ID, the process does not stop but the response is enriched with a warning appended message to inform user that at least one PTC in the query is not the correct one.

INVALID PASSENGER TYPE CODE ([CM#4213](#))

- **CMS related warning**

- CMS content not retrieved

In case the CMS content was not retrieved, a warning will be returned in the OfferPriceRS and the content from static file will be mapped in the response with static file description keys.

LOCALIZED CONTENT COULD NOT BE RETRIEVED FROM CMS ([CM#12345](#))

- CMS content partially retrieved

In case the CMS content was partially retrieved, the fare conditions returned will be mapped in OfferPriceRS with a specific warning. For the missing fare conditions, no fallback to the static file will be done.

LOCALIZED CONTENT PARTIALLY RETRIEVED FROM CMS ([CM#12346](#))
