1 Overview

The function is used to request a catalogue of Ancillary Services.

1.1 Short Description

The ServiceList request allows the user to retrieve the catalogue of ancillary services related to his flight(s), either during the prime booking flow or after the ticket issuance (post-sale flow).

1.2 Current Scope

The verb supports a catalog request from:

- an offer ID (prime booking flow)
- an order ID (post-sale flow)
- a PNR (post-sale flow).

Are considered in the scope of the current release:

- service types F (flight related), P (prepaid baggage), C (extra baggage charges), M (standalone services)
- seats: the presence of seats in ServiceList must be driven by a configuration parameter that can be switched on/off: if the client uses SeatAvailabilityRQ/RS, seats should not be proposed in ServiceListRS
- upgrade
- pack of services
- all fare types (public, private, nego, uni)
- currency override.

1.3 Out of scope

The verb does not support a catalogue request from:

- an e-ticket number

The following features are not supported:

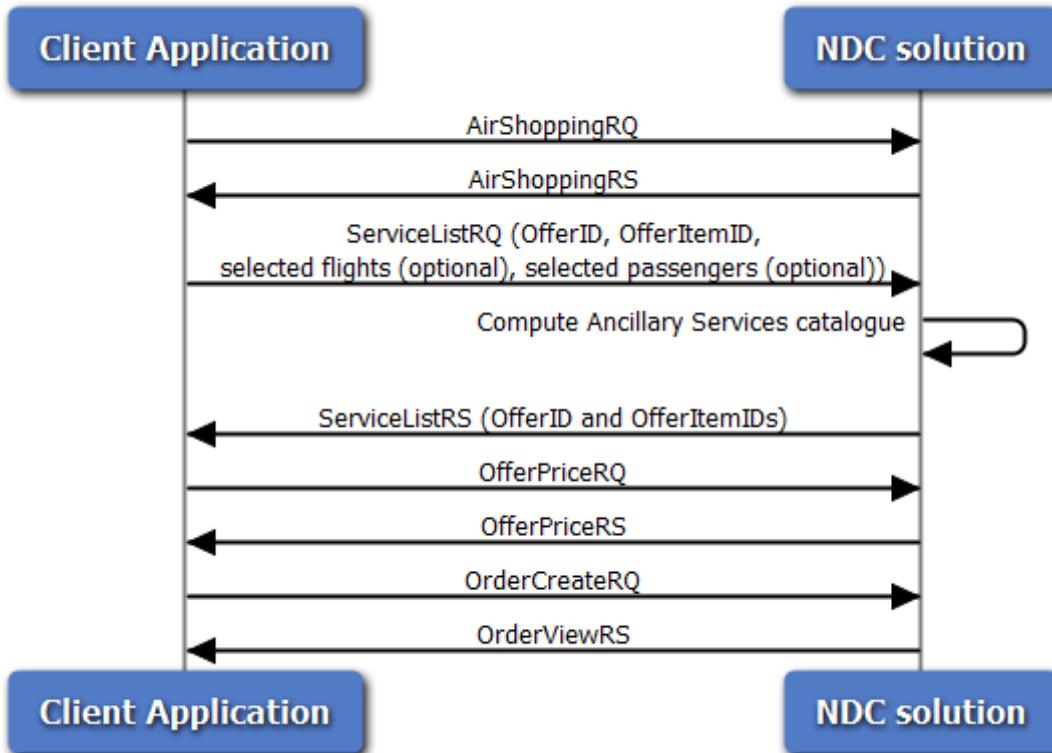

- baggage allowance description (checked and carry-on)
- service type F, P or C with a weight range (not supported by XSD)
- booking format (not supported by the XSD + 1A internal format)
- EMD characteristics (not supported by the XSD)
- catalog with quota
- catalog in miles
- UCI DID reference and specific DCS flow
- Frequent flyer allowance
- Operating PNR
- Bounds definition in input
- Open segments

- Filter by service classification (not supported by the XSD).

1.4 Sequence Diagram

1.4.1 Prime booking flow

This refers to the case in which the ServiceListRQ is received after a successful AirShoppingRQ/RS (and potentially a FlightPriceRQ/RS). In this case the ServiceListRQ takes in input one of the OfferIDs (and the mandatory OfferItemID containing the flights) returned in AirShoppingRS.

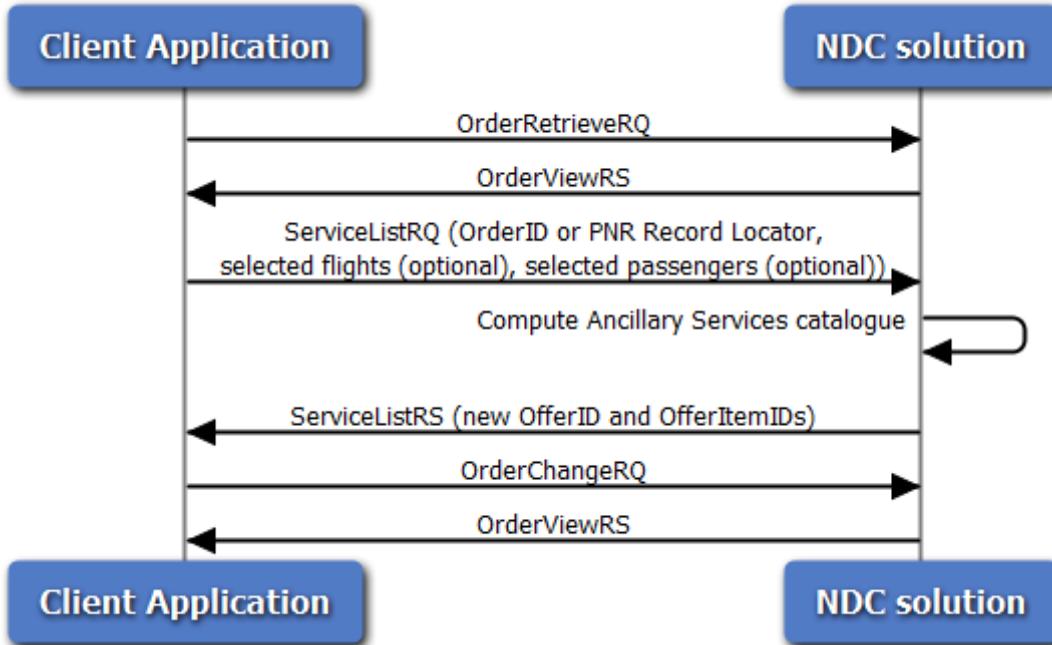

ServiceList in prime booking flow

Note: FlightPriceRQ/RS is mandatory in this flow, but it can be performed before or after the ServiceList call.

1.4.2 Post-sale flow

This refers to the case in which the catalogue of services is requested after the issuance of the tickets. In this case the ServiceListRQ takes in input either the PNR recloc or the OrderID.

An OrderRetrieveRQ is needed before the ServiceListRQ/RS.

ServiceList in Post-sale flow

1.5 Prerequisites

The airline for which the catalogue of services is requested is AAAS user.

2 Building a query: ServiceListRQ

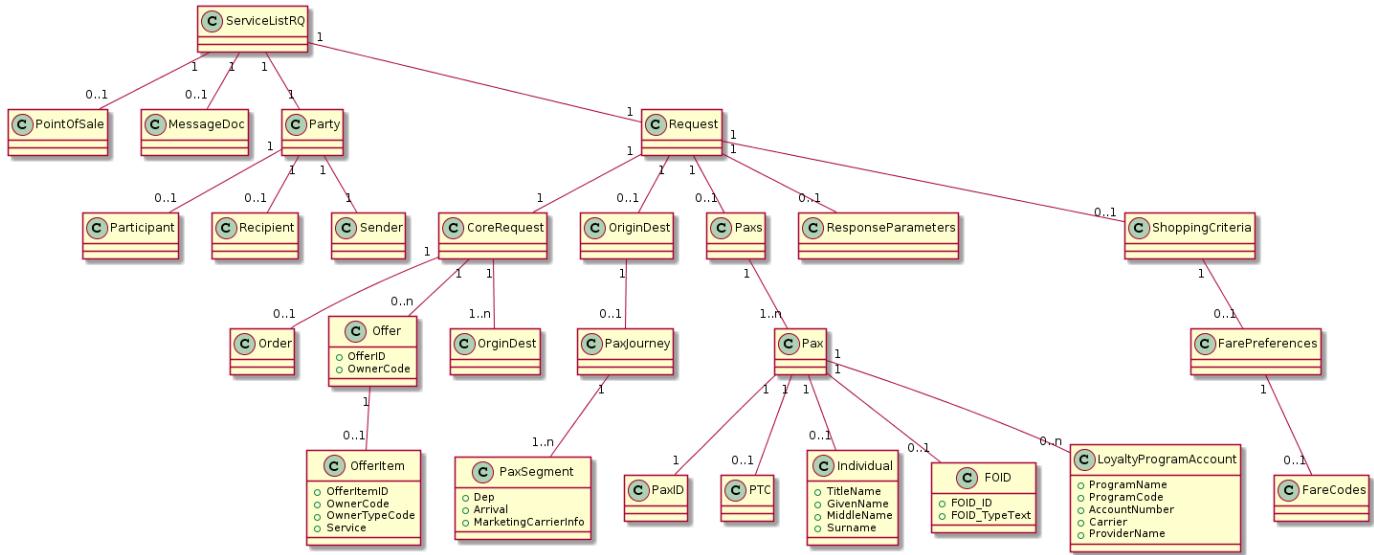

2.1 Prime Booking Flow

2.1.1 Functional Description

In prime booking flow, the query is composed of:

- the offer ID and offer item ID which contain the flights
- If applicable a list of passengers to which the catalog will apply (catalogue request with passenger selection)
- If applicable a list of flights to which the catalog will apply (catalogue request with flight selection).

Traveler information. Not needed if the catalogue is requested for all the passengers present in the offer.

Up to 9 travelers occupying a seat and 9 infants in lap can be defined.

  </FarePreferences>
</ShoppingCriteria>
```

2.2 Post Sale Flow

In post sale flow, the query is composed of:

- If applicable a list of flights in the PNR to which the catalog will apply.

If no passenger or flight is specified in the query, the catalog will be based on the full PNR content.
